The 'saur had a jaw powerful enough to crush the bones of other dinosaurs – and, while contested, calculations based on skeletal anatomy and muscle mass suggest that a T. rex in a hurry could have moved at speeds of 17 miles an hour or more. — Brian Switek, Smithsonian, "How We Elected T. rex to be Our Tyrant Lizard King," 21 June 2018 His research focuses on ...Dear Twitpic Community - thank you for all the wonderful photos you have taken over the years. We have now placed Twitpic in an archived state. We are very excited to be teaming up with our good friend and former scholar in residence--Mexican writer and scholar Salvador Olgún--for the 4th iteration of Muerte en Mexico, in which we travel to Mexico to visit various Dia de Muertos, or Day of the Dead, celebrations, while also learning about the holiday's rich and fascinating history. This year we will explore the states of Yucatan and ...“A gorgeous compendium of anatomical drawings from the mid-19th century... one senses the awe the body once commanded when it was a new, uncharted world begging for exploration.”
