

# Download Gyrocopter Flight Manual

An autogyro (from Greek *αὐτός* and *γύρω*, "self-turning"), also known as a gyroplane or gyrocopter, is a type of rotorcraft that uses an unpowered rotor in free autorotation to develop lift. Forward thrust is provided independently, typically by an engine-driven propeller. While similar to a helicopter rotor in appearance, the autogyro's rotor must have air flowing across the rotor ... When the rotor started to really pick up, Bensen gave Elrod another thumbs-up and we sped to an airspeed of 35 to 40 mph. The nosewheel lifted off the ground as Bensen moved the stick forward to balance the trainer on the main wheels, keeping the nose and tailwheel elevated prior to lifting off. With a sharp eye, keen enthusiasm and determination to design the best possible gyrocopter, Jim Vanek take the Sport Copter gyrocopter to a new level. Gyroplane Plans Download Page.
