In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and animals.

Colloquially, the term "artificial intelligence" is used to describe machines that mimic "cognitive" functions that humans associate with other human minds, such as "learning" and "problem ...Coursera provides universal access to the world's best education, partnering with top universities and organizations to offer courses online..01 ABOUT ME. I am a staff research scientist working in statistical machine learning and artificial intelligence at DeepMind, London, where we work towards the goal of developing intelligent and general-purpose learning systems.. I am most interested in research that combines multiple scientific disciplines and views of computational and machine learning problems.Artificial general intelligence (AGI) is the intelligence of a machine that could successfully perform any intellectual task that a human being can. It is a primary goal of some artificial intelligence research and a common topic in science fiction and future studies.Some researchers refer to Artificial general intelligence as "strong AI", "full AI" or as the ability of a machine to perform ...
