

# Download Stihl Km130r Repair Manual

I have a KM130R that I put a new carb on. Of course the new carb needs to be adjusted but I can't figure it out. There are so many different ways according to the Net so I wanted to reach out here. Just couple of questions where do I start the high and low speed screws? Do I adjust with or without an attachment on the motor? Thanks I greatly appreciate you advice/help.
