A fill trestle or filling trestle is a temporary construction trestle that is built to provide a scaffolding for the placement of fill or an earthen dam. Typically, the trestle is built across the valley and a railway is laid across the trestle. Specially designed side-dumping railroad cars filled with earth or gravel are pushed onto it and dumped, burying the trestle. Construction. All things considered, though, the construction of the permanent and temporary trestles went remarkably smoothly. The project's greatest challenge, contending with the settling of the fill, was not even trestle-related: Here the real work of building the Lucin Cut-Off came in.
