The 4-zone climate control is currently only available in the Touareg, and sets new standards for passenger comfort whilst travelling. The system offers 4-way control of the air conditioning system, meaning that passengers in the rear seats can tailor the temperature, blower intensity and direction of the air to their needs. Climatronic dual-zone automatic climate control offers a whole new level of comfort to those in equipped Volkswagen models. No more fighting over the A/C and no more fidgeting with the heat or A/C to get comfortable. With the Climatronic climate control system, all you have to do is set your desired temperature and then sit back and relax. So, what does the automatic climate control do in the 2015 Volkswagen Golf? How to Quickly Cool Down Volkswagen Golf. With the Golf's automatic climate control system, there are ways to cool down quickly in the summer heat. Simply press the AUTO button to turn the system on and then adjust the temperature to your preferred setting. Dual-zone climate control, or three-zone in larger vehicles, solves this problem by giving two a/c knobs that separately allow the driver and passenger to control the temperature coming from their own vents. In the case of three-zone climate control, a knob in the rear allows for control for rear passengers as well.
